

My Food Program now connects with popular Child Care Management software to make daily work easier for providers and centers. Meal counts and attendance only need to be entered once, in the system they already use. The information is automatically shared with My Food Program, so there's no double entry and less room for mistakes. That means less time spent on paperwork and more time focused on children, while still meeting CACFP requirements. See which tasks are shared between the systems and which ones each system handles on its own.

## ENTER IN ONE SOFTWARE; SHARE WITH BOTH

- Menus
- Attendance
- Meal Counts
- Center or Provider Information
- Center/Site Information
- Parent/Household Information
- Child Information

CACFP sponsors still retain full control over all CACFP-specific recordkeeping and compliance within My Food Program. There is no cost for your providers or centers to connect My Food Program to their Child Care Management Software or to exchange data.

Visit our website to see what tasks customers will complete in each software, and see which Child Care Management Softwares are ready to get connected.
